1. GENERAL DESCRIPTION

Global LCD Panel Exchange Center

1.1 OVERVIEW

This module is color active matrix LCD Open-cell incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, PWB. Graphics and texts can be displayed on a 1920×RGB×1080 dots panel with about 16.7M colors (R/G/B 6bits+Hi FRC data in each color) by using LVDS(Low Voltage Differential Signaling) to interface, +5V of DC supply voltage.

1.2 CHARACTERISTICS

| CHARACTERISTICS ITEMS | SPECIFICATIONS |
|---|-------------------------------------|
| Screen Diagonal [in] | 21.5" |
| Pixels [lines] | 1920×1080 |
| Active Area [mm] | 476.64 (H) x 268.11 (V) |
| Pixel Pitch [mm] | 0.24825 (H) x 0.24825 (V) |
| Pixel Arrangement | RGB vertical stripe |
| Weight [g] | (540) |
| Physical Size(COF/PWB included) [mm] | 487.54(W) x 335.81(H) x 3(D) Typ. |
| TFT glass Size [mm] | 487.54(W) x 282.91(H) x 1.83(D) Typ |
| Display Mode | Normally White |
| Surface treatment (Without the protection film) | Anti-glare,3H |

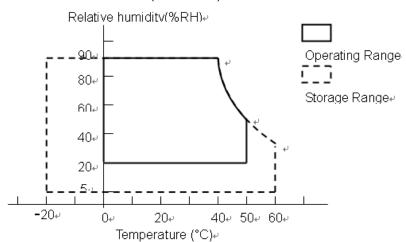

2. ABSOLUTE MAXIMUM RATINGS

2.1 ABSOLUTE RATINGS OF ENVIRONMENT

| Item | Symbol | Va | Unit | Note | | |
|-------------------------------|-----------------|------|-------|-------|---------------|--|
| item | Symbol | Min. | Max. | Ullit | Note | |
| Storage Temperature | T _{ST} | -20 | +60 | °C | (1), (3) | |
| Operating Ambient Temperature | T _{OP} | 0 | 50 | °C | (1), (2), (3) | |
| Altitude Operating | A OP | 0 | 5000 | М | (3) | |
| Altitude Storage | A _{ST} | 0 | 12000 | М | (3) | |

Note (1) Temperature and relative humidity range is shown in the figure below.

- (a) 90 %RH Max. (Ta \leq 40 °C).
- (b) Wet-bulb temperature should be 40 °C Max. (Ta < 40 °C).

(c) No condensation.

Global LCD Panel Exchange Center

Note (2) The maximum operating temperature is based on the test condition that the surface temperature of display area is less than or equal to 65 °C with LCD module alone in a temperature controlled chamber. Thermal management should be considered in your product design to prevent the surface temperature of display area from being over 65 °C. The range of operating temperature may degrade in case of improper thermal management in your product design.

Note (3) The rating of environment is base on LCD module. Leave LCD cell alone, this environment condition can't be guaranteed. Except LCD cell, the customer has to consider the ability of other parts of LCD module and LCD module process.

2.2 ABSOLUTE RATINGS OF ENVIRONMENT (OPEN CELL)

Storage Condition: With shipping package. Storage temperature range: 0 °C to 40 °C Storage humidity range: 95%RH or less

Shelf life: one year

3. ELECTRICAL CHARACTERISTICS

3-1 Absolute Maximum Rating

| Parameter | Symbol | Condition | Ratings | Unit | Remark |
|-----------------------|--------|-----------|-----------|--------------|--------|
| +5V supply voltage | VCC | Ta=25°C | 0~+6 | V | |
| Storage temperature | Tstg | | -25 ~ +60 | $^{\circ}$ | |
| Operation temperature | Тора | | 0~+50 | $^{\circ}$ C | |

3-2 Control circuit driving

| Parameter | Symbol | Min | Тур | Max | Unit | Remark | |
|---------------------------------|----------------|-------|------|------|------|----------|------------------------------|
| | Supply voltage | Vcc | 4.5 | 5.0 | 5.5 | V | [Note 1] |
| +5V supply voltage | Current | Icc | _ | TBD | TBD | mA | VCC=5V,60Hz Black Pattern |
| | dissipation | IRUSH | _ | TBD | TBD | mA | [Note 2] |
| | | TRUSH | _ | TBD | TBD | mA | [Note 2] |
| Permissible input r | ripple voltage | VRP | | _ | 100 | mVp-p | Vcc=+5.0V |
| Differential Input | High | VTH | _ | _ | 100 | mV | VCM=+1.2V |
| Threshold Voltage | Low | VTL | -100 | _ | _ | mV | 【Note 3】 |
| Input Differential V | oltage | VID | 100 | _ | 600 | mV | [Note 3] |
| Differential Input C Voltage | VCM | +1.0 | +1.2 | +1.5 | V | [Note 3] | |
| Power consumpt | ion | Р | | (6) | | W | |

[VCM]: Common mode voltage of LVDS driver

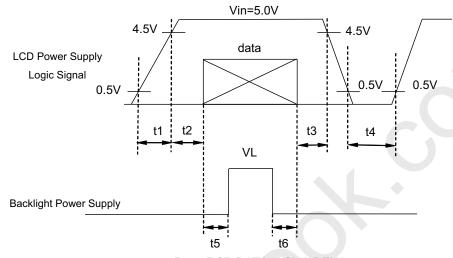

[Note1]

*1)Power · data sequence

Global LCD Panel Exchange Center

$$0.50 ms \le t1 \le 10 ms$$
 $t4 \ge 1 sec$ $0.01 ms < t2 \le 50 ms$ $t5 \ge 200 ms$ $0.01 ms < t3 \le 50 ms$ $t6 \ge 200 ms$

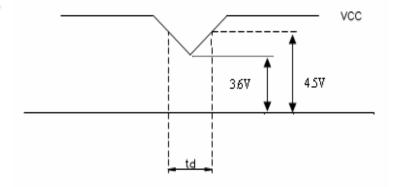

Data: RGB DATA, DCLK, DENA

- Data: CLKIN±,RIN0±,RIN1±, RIN2±, RIN3±
- About the relation between data input and back light lighting, please base on the above-mentioned input sequence.

When back light is switched on before panel operation or after a panel operation stop, it may not display normally. But this phenomenon is not based on change of an incoming signal, and does not give damage to a liquid crystal display.

VCC-dip conditions:

- (1) When $3.6V \le Vcc(min) < 4.5V$: $td \le 10 \text{ ms}$
- (2) When Vcc <3.6 V, VCC-dip conditions should also follow the VCC-turn-on conditions.

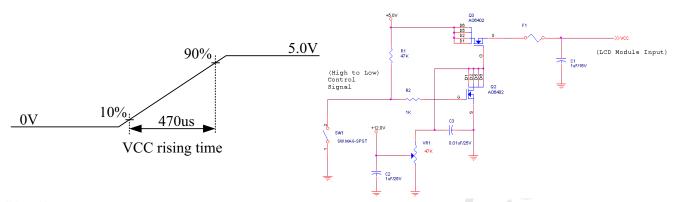

[Note2]

Irush Measurement Condition

Global LCD Panel Exchange Center

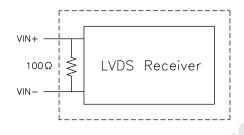

The duration of rising time of power input is 470us.

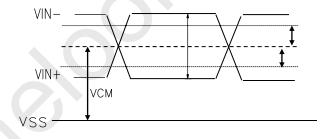

[Note3]

VIN+: Positive differential DATA & CLK Input

VIN-: Negative differential DATA & CLK Input

4. INTERFACE PIN CONNECTION

4.1 TFT LCD OPEN CELL

CN1 (Interface signals and +5V DC power supply) Shown on the next table. Using connector:

FI-XB30SRL-HF-11 (JAE) or compatible

Matching connector: FI-X30HL(JAE) or compatible

0: Low level voltage,

1: High level voltage.

Each basic color can be displayed in 256 gray scales from 8 bit data signals. According to the combination of total 24 bit data signals, the 16,7M colors display can be achieved on the screen.

5. INTERFACE TIMING

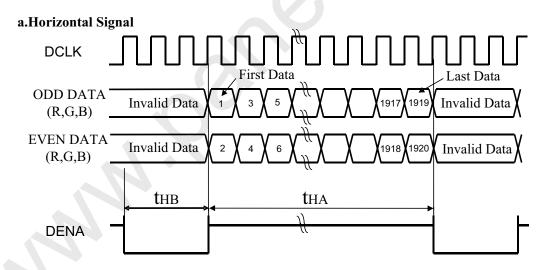

5.1 INPUT SIGNAL TIMING SPECIFICATIONS

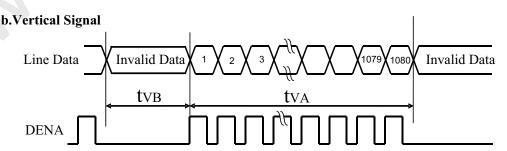

The input signal timing specifications are shown as the following table and timing diagram.

| | | ITE | M | SYMBOL | MIN. | TYP. | MAX. | UNIT |
|----------|------|-------------------------|---------------------------|--------|-------|-------|-------|------|
| | DCLK | | Freq. | fCLK | 55 | 72 | 90 | MHz |
| | DOLK | | Cycle | tCLK | 18.18 | 13.89 | 11.11 | ns |
| | | | Horizontal effective time | tHA | 960 | 960 | 960 | tCLK |
| LCD | | Horizontal ENA Vertical | Horizontal blank time | tHB | 32 | 100 | 115 | tCLK |
| Timing | | | Horizontal total time | tH | 992 | 1060 | 1075 | tCLK |
| riiiiiig | DENA | | Vertical frame Rate | Fr | 50 | 60 | 75 | Hz |
| | | | Vertical total time | tV | 1084 | 1130 | 1170 | tH |
| | | | Vertical effective time | | tVA | 1080 | 1080 | 1080 |
| | | | Vertical blank time | tVB | 4 | 50 | 90 | tH |

[Note]

- *1) DENA (data enable) usually is positive
- *2) DCLK still inputs during blanking
- *3) LVDS transmitter IC: NT71679-00024(NVT)
- *4) DE mode only
- *5) It maybe cause flicker at 50Hz.
- (2). Timing Chart

6. OPTICAL CHARACTERISTICS

| | | | | | | | | |

^{*}The measurement shall be executed 30 minutes after lighting at rating.

[Note] The optical characteristics are measured using the following equipment.

Measurement of Contrast, Luminance ,Chromaticity

^{*}These values are measured with CPL standard back light unit.

Global LCD Panel Exchange Center

[Note 1] Definitions of viewing angle range:

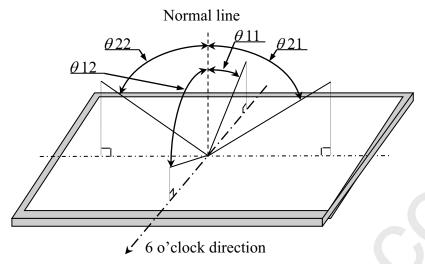

Fig. Viewing angle

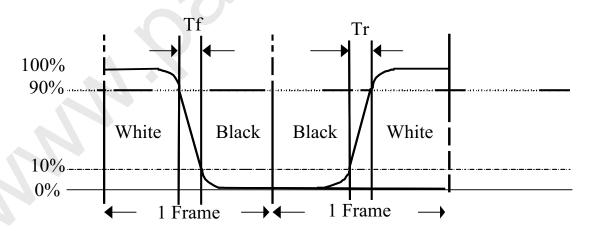

[Note 2] Definition of contrast ratio:

The contrast ratio is defined as the following.

$$Contrast Ratio = \frac{Luminance(Brightness) with white screen}{Luminance(Brightness) with black screen}$$

[Note 3] Definition of response time

The output signals of photo detector are measured when the input signals are changed from "Full Black" to "Full White" (rising time, TR), and from "Full White" to "Full Black" (falling time, TF), respectively. The response time is interval between the 10% and 90% (1 frame at 60 Hz) of amplitudes.

Response time=TR + TF

[Note 4] This shall be measured at center of the screen.

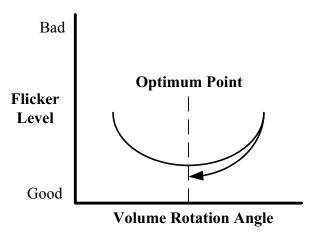

6.2 FLICKER ADJUSTMENT

a) Adjustment Pattern: 2H1V Checker pattern as follow:

| R | G ° | B | R | G | B | R | G ° | B | R | G | B | R | G ° | B | R | G | B |
|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|
| R | G 127 | B | R | G | B 127 | R | G 127 | B | R | G | B | R | G 127 | B | R | G | B |
| R | G 127 | B | R | G | B | R | G 127 | B | R | G | B | R | G 127 | B | R | G | B |
| R 127 | G | B | R | G 127 | B | R | G | B | R | G 127 | B | R | G | B | R | G 127 | B |
| R 127 | G | B | R | G 127 | B | R | G | B | R | G 127 | B | R | G | B | R | G 127 | B |
| R | G | B | R | G | B | R | G | B | R | G ° | B | R | G | B | R | G | B |
| R | G | B | R | G | B | R | G | B | R | G | B | R | G | B | R | G | B |

b) Adjustment Method:

Flicker should be adjusted by turning the volume for flicker adjustment by the ceramic driver. It is adjusted to the point with least flickering of the whole screen. After making it surely overrun at onec, it should be adjusted to the optimum point.

7. DEFINITION OF LABELS

8. PACKING

8.1 PACKING SPECIFICATIONS

: TBD (a) Piling number of cartons (b) Packing quantity in one carton : TBD (c) Carton size : TBD

(d) Total mass of one carton filled with full open-cell : TBD

8.2 PACKING METHOD

9. PRECAUTIONS

- (a) Because the Open-Cell is too weak to destroy by static electricity, please don't touch the terminal with bare
- (b) Front polarizer can easily be damaged. Pay attention on it.
- (c) Since long contact with drops of water may cause discoloration or spots, please wipe off them as soon as possible.
- (d) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- (e) The Panel will be broken or chipped when it is dropped or bumped against a hard substance.
- (f) Precautions of peeling off the Protection film:

Be sure to peel off slowly (recommended more than 7 sec.) and constant speed.

Peeling direction shown in the next Fig.

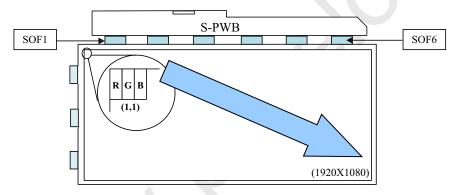

Be sure to ground person with adequate methods such as the anti-static wrist band.

Be sure to connect S-PWBs to GND while peeling off the protection film.

lonized air should be blown to the surface while peeling off the protection film.

The protection film must not touch drivers and S-PWBs.

After the protection film has been peeled off, some adhesive may be remained on the polarizer. Please use isopropyl-alcohol to remove it.

(g) Since the Open-cell consists of TFT and electronic circuits with CMOS-ICs, which are very weak to electrostatic discharge, persons who are handling an Open-Cell should be grounded though adequate methods such as an anti-static wrist band. Connector pins should not be touched directly with bare hands.

Reference: Process control standard of CPL.

| | item | Management standard value and performance standard |
|---|--|--|
| 1 | Anti-static mat(shelf) | 1to50[Mega ohm] |
| 2 | Anti-static mat(floor, desk) | 1to100[Mega ohm] |
| 3 | Ionizer | Attenuate from ± 1000 V to ± 100 V within two seconds. |
| 4 | Anti-static wrist band | 0.8 to 10 [Mega ohm] |
| 5 | Anti-static wrist band entry and ground resistance | Below 1000[ohm] |
| 6 | Temperature | 22 to 26 [℃] |
| 7 | Humidity | 60 to 70 [%] |

(h) Since the Open-cell has some PWBS, please take care to keep them off any stress or pressure when handling or installing the Open-cell, otherwise some of electronic parts on them may be damaged.

Global LCD Panel Exchange Center

LM215DA-T01 Tentative Spec

- (i) Be sure to turn off the power supply when inserting or disconnecting the cable.
- (j) Be sure to design the module and cabinet so that the Open-cell van is installed without any extra stress such as warp or twist.
- (k) When handling and assembling Open-Cell into module, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of materials such as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the Open-Cell.
- (I) Applying too much force and stress to PWBs and drivers may cause a malfunction electrically and mechanically.
- (m) The Open-cell has high frequency circuits. Sufficient suppression to EMI should be done by system manufactures.
- (n) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- (o) The chemical compound, which causes the destruction of ozone layer, is not being used.
- (p) This Open-Cell module is corresponded to RoHs.
- (q) When any question or issue occurs, it shall be solved by mutual discussion.

10. Reliability test item

| Test item | Condition |
|------------------------------------|-------------------------------------|
| High temperature storage test | Ta= 60°C,240h |
| Low temperature storage test | Ta=-25°C,240h |
| High temperature and high humidity | Ta= 40°C; 95%RH,240h |
| operation test | (No condensation) |
| High temperature operation test | Ta= 50°C,240h |
| Low temperature operation test | Ta= 0°C,240h |
| ESD(no operation) | Contact discharge on LVDS connector |
| | <u>+</u> 200V (200PF,0Ω) |

[Result evaluation criteria]

Under the display quality test condition with normal operation state, there shall be no change, which may affect practical display function.

11. Mechanical Drawing
